

ABSTRACT OF THE INVENTION

Described is a fishing lure system for use with fishing line. The fishing lure system consists of a spoon shaped lure body having a convex inner surface on which is attached a hook. Centrally mounted to the convex inner surface is a bracket having a curved portion to hold a rattle. The bracket also includes an elongated portion on which is mounted a removable skirt. Attached to the top surface of the bracket is a brush guard having a plurality of filaments extending from the bracket to the hook end. A connector is attached to the lure body for connection to a fishing line. The connector may optionally consist of an elongated wire on which is mounted a propeller.
